

Our Allendale

Barn-Lark Topic Summer

Design and Technology

The children will take inspiration from gardens they have seen and observed to create their own small world gardens. In the second half of the term, Barn-Larks will be going to look at the design of the park and think how to improve it, making their own miniature model of their suggestions.

Science

Barn-Larks will be exploring the local plants and wildlife in the area; learning about their habitats and food-chains. They will also learn about what plants and animals need to survive.

Geography

Children in Barn-Lark class will be learning fieldwork and observational skills and study the geography of their school and the surrounding area. They will explore and draw their own maps and learn about direction, including using a compass.

History

Barn-Lark children will be exploring the local history including lead mining and the roman links to the town. They will also learn about traditions of the village such as the Tar Barrels.

Religious Education

This term, Barn-Lark children will be studying Special Places. They will reflect on their own places which are special and important to them and look at different religious buildings or places of pilgrimages for a range of different faiths.
